Help locating and catching

OUR RECOVERY PROCESS

A search built around your cat

We learn the details

01

Review the escape point, last sighting, indoor or outdoor habits, hiding tendencies and recent activity.

We map the home area

02

Plan a focused search around home or the last-known location, extending up to roughly one mile.

We search likely cover

03

Scan accessible yards, fence lines, brush, wooded edges and potential hiding areas with thermal and visual cameras.

We help with recovery

04

If a possible match is found, we work with you to verify, approach quietly and try to catch your cat.

A LOST CAT SEARCH REQUIRES A DIFFERENT APPROACH

CLOSE TO HOME

Many cats stay near home and hide silently. We prioritize nearby yards, decks, sheds, brush, fence lines and other accessible hiding cover.

QUIET SEARCH WINDOWS

Indoor cats may freeze instead of responding. We favor calmer search windows, including late-night searches when conditions allow.

HONEST EXPECTATIONS

Thermal cameras detect visible heat signatures; they cannot see through roofs, walls, glass or heavy cover. Weather, legal airspace, property access and your cat's behavior can affect timing and coverage. No drone search can guarantee that an animal will be located or recovered.

Start close. Search smarter.

Lost cats often stay close to home, so we search the nearest likely hiding places first and expand strategically.

3-4 HRS

INITIAL SEARCH

Return searches: up to 4 hours

1 MILE

TARGET SEARCH RADIUS

Centered on home or the last sighting

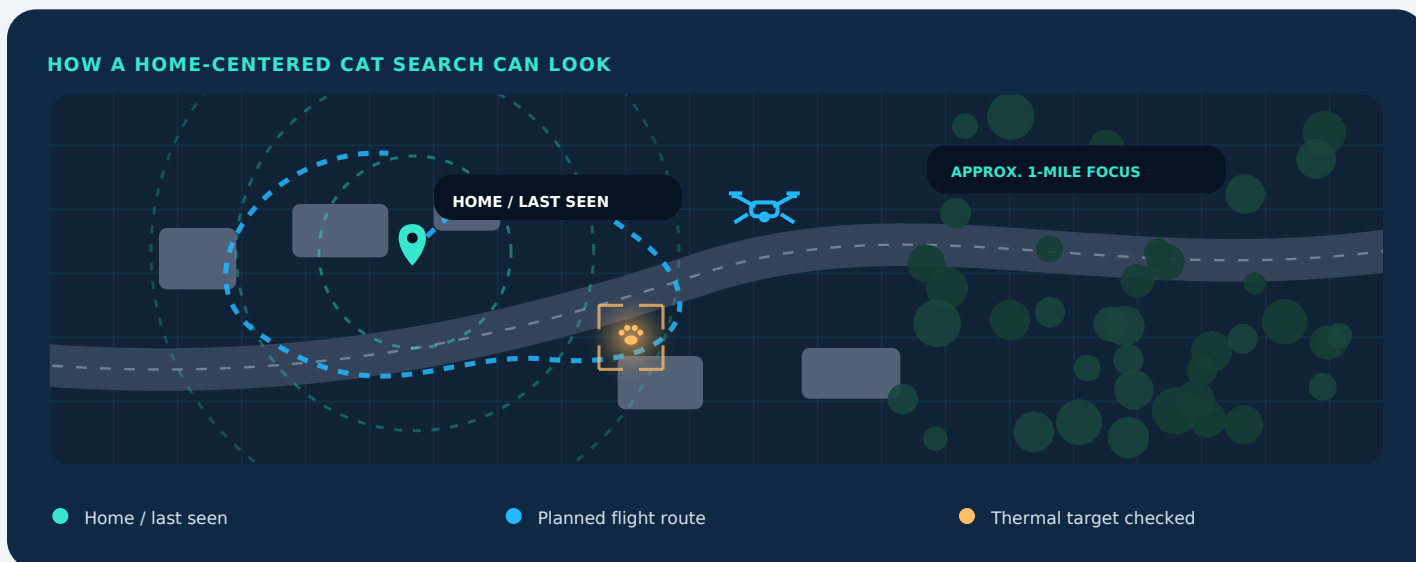

MULTIPLE

FLIGHTS + PASSES

Battery changes as the plan requires

HOW MUCH GROUND DO WE COVER?

A focused search up to a one-mile radius.

WHAT WE ARE DOING DURING YOUR SEARCH

Start at home

Review the escape point, indoor or outdoor habits, nearby structures and the closest likely hiding areas.

Work outward carefully

Scan yards, fence lines, brush, outbuildings, wooded edges and the surrounding neighborhood.

Recheck thermal targets

Use thermal and visual cameras, zoom, alternate viewing angles and additional search passes.

Plan a quiet recovery

Coordinate a calm approach, familiar voices, food or a humane trap if your cat is located.

WHAT CAN CHANGE SEARCH TIME OR COVERAGE?

The one-mile radius is the intended focus area, not a guarantee that every location inside it can be viewed. Roofs, dense cover, weather, private property, legal airspace and safe launch access may limit coverage.

Be ready. Stay informed.

Everything we need, everything you receive and exactly how your search pricing works.

BEFORE WE ARRIVE

Have these details ready

- ✓ A recent photo, your cat's name and identifying markings.
- ✓ The exact escape point, last sighting and time missing.
- ✓ Indoor/outdoor habits, favorite food and hiding behavior.
- ✓ Nearby sheds, decks, garages, brush or other hiding spots.
- ✓ Keep the area quiet; avoid chasing or startling your cat.

WHAT SKYVIEW PROVIDES

More than a flight

- ✓ A planned 3-4 hour thermal and visual drone search.
- ✓ Communication and updates throughout your search.
- ✓ Videos of the drone flights so you can review what we saw.
- ✓ Maps of the flight routes showing the areas searched.
- ✓ Help confirming, approaching and trying to catch your cat.

IF YOUR CAT IS SPOTTED

We work with you to bring them home.

We will help confirm the sighting, coordinate a quiet approach and try to safely catch your cat. Depending on the situation, that may involve familiar voices, food, watching a hiding spot or recommending a humane trap.

STRAIGHTFORWARD PRICING

Know the cost before we begin.

\$200

ON-CALL FEE

Initial search deployment

60 mi

INCLUDED

Round-trip miles, first trip

\$1.50

PER EXTRA MILE

Beyond included mileage

RETURN SEARCHES - UP TO 4 HOURS

No additional on-call fee. The first 30 round-trip miles are included; additional miles are \$1.50 per mile.

EXAMPLE: 60 MILES ONE WAY

Initial search: 120 round-trip miles

$\$200 + (60 \times \$1.50) = \$290$

Return visit: same location

$(90 \times \$1.50) = \135
